

# User Guide

## Introduction

Welcome to the **Ad Auction Dashboard Application**, a user-friendly platform designed to help customers track, manage, and analyze their advertisement campaigns.

This dashboard provides customers with an easy-to-use interface for monitoring key advertising metrics, helping them understand the extent of their advertisement's reach. Users can check performance indicators such as impressions, clicks, conversations, uniques, bounces, and total cost. This data helps them optimize their marketing efforts.

## How to Use

- **Logging In**  
Open the Ad Dashboard. Enter your username and password. Click "Login".
- **Adding a Campaign**  
Click the "Add Campaign" button at the top. Upload your campaign data files (Impression, clicks, and server logs). Enter a name for your campaign. After upload, the system may take a moment to process and display your campaign's metrics. Use the Campaign Dropdown at the top to select from previously uploaded campaigns.
- **Applying Filters**  
On the left-hand panel, use the filters to focus on specific audience segments or contexts. The full guide on filters is given below in the Filters Guide section. After setting filters, click "Apply Filters" to update the dashboard.
- **Switching to Histogram View**  
Use the "Switch to Histogram" button for an alternate data visualization format.
- **Comparing Graphs**  
Click on the "Compare Graphs" button to compare two different audience segments or contexts side-by-side in a chart format. Choose a metric to view and apply the filters you want to compare on the two filters panel. Click "Compare" to view the two charts with your desired filters.
- **Exporting the Campaign Data**  
Choose the desired export format from the dropdown (PDF or CSV). Click "Export Graph" to download both graph views and data. Your exported file will reflect all applied filters.

## Filters Guide

The filters section allows users to narrow down campaign performance data based on specific time periods, contexts, and audience segments. Using filters can give insights into how different groups respond to the advertisements.

| Filter            | Description                                                                                               |
|-------------------|-----------------------------------------------------------------------------------------------------------|
| Gender            | Filter performance by gender (Male / Female)                                                              |
| Age               | Filter performance by predefined age ranges (<25 / 25-34 / 35-44 / 45-54 / >54)                           |
| Income            | Filter performance by the income levels (Low / Medium / High)                                             |
| Context           | Filter performance by context of advertisement (News / Shopping / Social-Media / Blog / Hobbies / Travel) |
| Date Range        | Select a time period to view data.                                                                        |
| Time Granularity  | Choose the level of time detail (Hour / Day / Week)                                                       |
| Bounce Definition | Define how a bounce is counted (Page Left / Single Page View)                                             |

## Frequently Asked Questions

### 1. How do I add a new campaign to the dashboard?

To add a new campaign, click on the “Add Campaign” button. You can then upload your Impression, Click, and Server Logs for your campaign. You can then view the metrics of your campaign, displayed on the dashboard.

### 2. How do I switch between different graph views?

To switch between different graph views, click on the “Switch to Histogram” button. This will change the display from a standard graph to a histogram view.

### 3. Can I compare two sets of filters side by side?

Yes. Click on the “Compare Graphs” button. Here you can select a key metric to view. Then, apply the filters you want from the two filter panels. Then click “Apply”. Two graphs will be displayed side by side with all your desired filters applied to them.

### 4. What should I do if I get a login error?

If you enter an incorrect password, the system will display "Password is incorrect." Double-check your login credentials and try again. If the issue persists, reset your credentials.

### 5. What is the purpose of the "Export Graph" feature?

The "Export Graph" button allows you to save a copy of the current chart or graph for sharing or reporting. You can choose the format (CSV / PDF) using the "Export Format" dropdown next to it.

**6. Can I manage user access or permissions?**

If you're logged in as an administrator, you can click on the "Authorize Users" button to manage team members. You can also approve accounts and adjust their roles. Regular users cannot see this option.

## **Known Problems**

**1. Data takes time to load after campaign addition**

Please wait a few moments for the data to load. If it takes longer, ensure the internet connection is stable or try reloading the page.

**2. Filters not updating immediately**

Try refreshing the page or reapplying the time granularity by clicking "Apply Filters" again.

**3. Unclear function of some advanced filters**

Refer to the System User Manual for clear descriptions of all the advanced filters.

**4. Occasional lag when switching campaigns**

Wait a few seconds or refresh the page if the chart appears stuck.

**5. Admin features are not visible to regular users**

This is a feature. Administrative controls are hidden from regular users.

**6. Histogram view doesn't update correctly**

Try refreshing the histogram display page. If the issue persists, try reloading the campaign.

**7. Comparing graphs can lead to visual clutter**

Enlarge the window for the dashboard for a clearer view of the graphs in Compare Graphs View.
